

# Praxair Powder weight scales

I have three of them, two of them work. See next picture.

These are excellent as a scale and powder feeder cart. After you put the powder into the scale, reset the tare weight. After the spray job is complete, you know exactly how much powder you used for the job. I would not suggest trying to use them with the feedback loop for powder rate control, they bounce all over the place. Note: I have three control heads and three carts, but only one cable for the scale to head connection. They are still available from Praxair.

Scale #1 before and after 11kg (11 pounds of powder plus weight of bottle)

Scale #2 before and after 11kg (11 pounds of powder plus weight of bottle)

Make me an offer for all three, two work.
